

NOTICE OF UPCOMING CONSTRUCTION PROJECT

Installation of 44.0 kV Feeder

Timeline: Approximately Mid-June 2024 to late October 2024

Elexicon Energy, along with our team of contractors, will be in your area to install a new 44.0 kV feeder. This new feeder will include both underground trenching work and overhead pole line installations. The work area will extend from the Belleville Transformer Station (blue box), along University Avenue to Jamieson Bone Road, then south to north of Petrie Place (red box). The new feeder will help meet the growing demand for electricity in the area.

If you require additional information, please contact:
